

Advanced Global Production Facilities

Associates of Cape Cod, Inc. (ACC) is a specialty manufacturer in the United States of endotoxin-assay reagents. ACC has recently completed a facility that combines headquarters, research and manufacturing functions. This major investment assures that ACC complies with increasingly stringent FDA regulatory requirements, with the ability to flexibly and quickly integrate production of future new products.

In 2004, manufacturing approval was granted for Fungitell™ (diagnostics) in several major products under the name Pyrotell® series, an endotoxin measurement test reagent. On September 24, 2004, a grand opening ceremony marked commencement of manufacturing at the new facilities.

This significant upgrade of ACC's infrastructure assures the highest levels of quality in our products, and Seikagaku is now transferring global production of endotoxin-related products to ACC.
