LABORATORIES AND PLANTS

CENTRAL RESEARCH LABORATORIES

The hub of Seikagaku's drug development activities is the Central Research Laboratories. With advanced equipment and a quality work environment, the facility is managed under policies designed to maximize researcher creativity and foster a self-help culture.

TAKAHAGI PLANT

The Takahagi Plant is Seikagaku's production facility for ARTZ®, ARTZ Dispo®, OPEGAN® and OPEGAN Hi®. It houses the first mass-production facility for pre-filled syringes in Japan, along with similar advanced equipment.

KURIHAMA PLANT

Products manufactured at the Kurihama Plant include pharmaceutical bulk, such as hyaluronic acid and chondroitin sulfate.

ASSOCIATES OF CAPE COD, INC.

Based in Falmouth, Massachusetts, Associates of Cape Cod, Inc. (ACC) is a leading global supplier of analyte detection products, including Lumulus Amebocyte Lysate (LAL) used for the detection and quantification of bacterial endotoxins.

ACC was the first manufacturer licensed by the FDA to manufacture LAL for use as a quality control test for endotoxin in the pharmaceutical and medical device markets. ACC is a truly global company, with offices on three continents, and a network of distributors servicing 59 countries. ACC offers the finest in quality control reagents, contract testing, enzymes, carbohydrate reagents endotoxin and glucan test kits and services for a range of needs around the world.
